

## **MONTH 1**

### **Conception**

***At this moment, the genetic makeup is complete, including the sex of the baby. Within about three days after conception, the fertilized egg is dividing very fast into many cells. It passes through the fallopian tube into the uterus, where it attaches to the uterine wall. The placenta, which will nourish the baby, also starts to form.***

*O Lord, You search me and You know me; you know when I sit and when I stand, you understand my thoughts from afar....behind and before you encircle me and rest your hand upon me....You formed my inmost being, you knit me together in my mother's womb. I praise you that I wonderfully and fearfully made....even my bones were not hidden from you as I made and fashioned in secret....Your eyes foresaw all my actions and all my days were written in your book before one of them ever came to be. (Psalm 139)*
