

## Month 2

- Signs of Pregnancy: Extreme fatigue, frequent urination, morning sickness, and hormonal fluctuations.
- The baby's heart is beating.
- The baby's brain is formed.

### Amazing things will happen this month.

At this point your baby is developing the structures that will eventually form his /her face and neck. The heart and blood vessels continue to develop. And the lungs, stomach, and liver start to develop. A home pregnancy test would show positive. Your baby's brain is beginning to grow! It develops from the neural

tube, a structure that will also become his/her spinal cord, nerves, and backbone. Your baby is now made up of three layers – the ectoderm, the mesoderm, and the endoderm – which will later form all of his/her organs and tissues. Amazingly, his/her tiny heart will divide into chambers and start to beat and pump blood. By 8 weeks your baby will be a little over half an inch in size. Eyelids and ears are forming, and you can see the tip of the nose. The arms and legs are well formed. The fingers and toes grow longer and more distinct.
